

- You want to control speaker volume from one convenient location (instead of going to each speaker to adjust volume it is easier to do it from a small mixer).

Mixers come in lots of sizes with varied technical features and capabilities. You can review the specs of different mixers on or site or we'll be glad to help you select the most cost-effective solution for your event. Simply select the 'Chat' button to get the attention of a technical rep or call us on the phone. We also stock plenty of cables to connect things to mixers.

GUIDE TO SELECTING AN AUDIO MIXER

You need a mixer when:

- You have more than one audio source or musical instrument you want to output to the speakers (two or more microphones, an iPod or audio deck, etc.).
- You want to connect a device to record the audio presentation or discussion (a tape or digital recorder with RCA or phone jacks).
